The Samsung ARTIK™ 710/710s Module is a highly-integrated System-in-Module that combines an eight-core ARM® Cortex®-A53 processor packaged with DRAM and Flash memory, a Security Subsystem, and a wide range of wireless communication options—such as 802.11a/b/g/n/ac for Wi-Fi®, Bluetooth® 4.2 (BLE+Classic), and 802.15.4 for Zigbee—all into an extremely compact footprint. The many standard digital control interfaces support external sensors and higher performance peripherals to expand the module's capabilities. With the combination of 802.11 , Bluetooth® and 802.15.4, the ARTIK 710/710s Module is the perfect choice for home automation and home hub devices, while also supporting a rich UI/UX capability for camera and display requirements. The inclusion of a hardware-based Secure Element works with the ARM® TrustZone® and Trustware's Trusted Execution Environment (TEE) to provide end-to-end security.

Processor	
CPU	Octa-core ARM® Cortex®-A53@1.4GHz
GPU	3D graphics accelerator

Revision	Date	Description
V1.0	October 17, 2016	ARTIK 710 datasheet.
V1.01	November 15, 2016	Updated Page 1 ARTIK 710/710s Module Picture. Updated Figure 2, Figure 3. Updated Mechanical Specification section. Updated Front Page. Updated ARTIK 710/710s Module ZigBee or Thread section. Updated ARTIK 710/710s Module Wi-Fi/Bluetooth section.
V1.02	November 20, 2017	Updated block diagram.
		In _Functional Interfaces_, each subsection describing an interface that has alternate functions clarifies which are selected by hardware at power-on reset. Changed specifications in _Wi-Fi®_. Cross references added to the appropriate tables in _GPIO Alternate Functions_.
		Secure Element and Secure IP reorganized into _Memory Controller_ section.
		Changed format of default functions in tables of _GPIO Alternate Functions_ to make it easier to see which function number is the default.
		Changed direction of LVDS signals in _Table 20_ from IO to O.
		Booting Selection section rewritten for clarity.
		Power Sequence section divided into _Power Sequence_ and _Power States_. Simplified power management state diagram.
		Section _Power/Current Consumption_ added.
		Changed storage temperature range in _Absolute Maximum Ratings_.
		Updated standards compliance in _CE_ and _EU Regulatory Disclosures_.
V1.03	November 30, 2016	Added ARTIK 710s features in _Module Overview_, _Block Diagram and Module Features_, and, _Security Subsystem_

BLOCK DIAGRAM AND MODULE FEATURES

Figure 2 shows the functional block diagram of the ARTIK 710/710s Module. It consists of an octa-core ARM® Cortex®-A53 application processor with 1GBof DDR3 and 4GB eMMC, PMIC power management, Security Subsystem, 802.11 for Wi-Fi®, Bluetooth®, 802.15.4 for Zigbee, and RF connectors.

ARTIK 710/710s Module Features

The following subsections describe the functions of the various ARTIK 710/710s Module blocks depicted in *Figure 2*.

GPIO

The ARTIK 710/710s Module provides a GPIO system with up to 110 GPIOs multiplexed with other I/O interface lines, as shown in *Figure 2* to support a wide variety of use-cases. The key features of the GPIO system are as follows:

- Programmable pull-up control

- Both edge detect and level detect functionality

- Support for programmable pull-up resistors

- Support for fast or normal slew operation

- Drive strength can be set from a register:

Value	Drive Strength *
0	2.6mA approximately (default)
1	5.2mA approximately
2	10.4mA approximately
3	15.6mA approximately

   *. Assumes the reference I/O voltage is 3.3V.
      All drive-strength values are approximate.

- Support for interrupt generation that can be triggered on one of the following:
  - Rising edge
  - Falling edge
  - High level detection
  - Low level detection
- The I/O data is clocked up to 50MHz

I^{2}S

The ARTIK 710/710s Module provides two 5-line Inter-IC Sound (I^{2}S) channels. I^{2}S is one of the most popular digital audio interfaces. The I^{2}S bus handles audio data and other signals, such as subcoding and control. It is possible to transmit data between two I^{2}S buses. The key features of the I^{2}S sub-system are

- One-port stereo (1 channel) I^{2}S-bus for audio with DMA based operation

- Serial data transfer of 16/24-bit per channel in Master and Slave mode

- A variety of interface modes:

  - I^{2}S, Left justified, Right justified, DSP mode

PWM

The ARTIK 710/710s Module provides two pulse width modulation (PWM) instances with the following key features:

- Two individual PWM channels with independent duty control and polarity
- Two 32-bit PWM timers, one per channel
- Support for static as well as dynamic setup
- Support for auto-reload and one shot pulse mode
- Dead zone generator
- Level interrupt generation

SPI

The ARTIK 710/710s Module provides two Serial Peripheral Interface (SPI) ports that transfer serial data. SPI support includes 8-bit/16-bit shift registers to transmit and receive data. During an SPI transfer, data is simultaneously transmitted (shifted out serially) and received (shifted in serially). The SPI implementation adheres to the protocols described by Texas Instruments Synchronous Serial Interface, National Semiconductor's Microwire, and Motorola's Serial Peripheral Interface. The key features of the SPI sub-system are

- Support for full-duplex
- 8-bit/16-bit shift register for Tx and Rx
- Compliant with the SPI protocol described by Texas Instruments, National Semiconductor and Motorola
- Support for independent 16-bit wide transmit and receive FIFOs 8 locations deep
- Support for master mode and slave mode
- Support for receive-without-transmit operation
- Max operating frequency :
    - Master Mode : Supports Tx up to 50MHz, Rx up to 20MHz
    - Slave Mode : Supports Tx up to 8MHz, Rx up to 8MHz

UART

The ARTIK 710/710s Module provides three 2-pin universal asynchronous receiver transmitters (UARTs). The key features of the UART sub-system are

- Separate 64×8 Tx and 64×8 Rx FIFO memory buffers
- Support for DMA-mode and interrupt-based mode of operation
- All independent channels support IrDA 1.0
- Each UART channel contains:
    - Programmable baud-rates
    - 1 or 2 stop bit insertion
    - 5-bit, 6-bit, 7-bit, or 8-bit data width
    - Parity checking

I^{2}C

The ARTIK 710/710s Module provides three generic I^{2}C blocks supporting both 100kb/s and 400kb/s speed modes. The key features of the I^{2}C sub-system are

- Support for multi-master and slave mode
- 7-bit addressing mode only
- Serial, 8-bit oriented and bi-directional data transfer
- Up to 100 kb/s in the standard mode
- Up to 400 kb/s in the fast mode
- Master transmit, master receive, slave transmit, and slave receive operation
- Support for both interrupt and polling events

ADC

The ADC interface controls one 28nm low-power CMOS 1.8V 12-bit ADC. The key features of the ADC sub-system are

- Up to six channels of analog input can be selected
- Conversion of analog input into 12-bit binary code up to 1 Mega Sample Per Second (MSPS)
- 1.0mW power consumption when running 1MSPS
- Input frequency up to 100kHz

Power Management

The ARTIK 710/710s Module power requirements are managed using a power management integrated circuit (PMIC). This PMIC device has five fully-integrated fixed-frequency current-mode synchronous PWM step-down converters that can achieve peak efficiencies of up to 97%.The regulators operate at a fixed high frequency, minimizing noise in sensitive applications and allowing the use of small form factor components. These five regulators fully satisfy the power and control requirements of the ARTIK 710/710s Module. Dynamic Voltage Scaling (DVS) of the various core voltages is supported using I^{2}C control.

In addition, the ARTIK 710/710s Module provides up to five low-noise LDOs for external use.

Wi-Fi®

The ARTIK 710/710s Module has a fully integrated WLAN block covering IEEE 802.11 a/b/g/n/ac. The most important hardware features of the module are

- 802.11 a/b/g/n/ac dual-band SISO that is 2.4GHz/5GHz-compliant
- 1T1R 2.4GHz/5GHz band
- Support for 20MHz, 40MHz, and 80MHz bandwidth (86.7/433.3Mbps PHY rate)
- Enhanced 802.11/Bluetooth coexistence control to improve transmission quality in different profiles
- Use of an SDIO interface

Bluetooth®

The ARTIK 710/710s Module has a fully integrated 4.0 block (BLE+Classic). The most important hardware features of the module are

- Bluetooth 4.0 (BLE+Classic)
- Enhanced 802.11/Bluetooth Coexistence control to improve transmission quality in different profiles

802.15.4 for Zigbee

The ARTIK 710/710s Module carries fully-integrated 802.15.4 functionality. The most important hardware features are

- Fully integrated 2.4 GHz, IEEE 802.15.4-compliant transceiver
- Complete system-on-chip using 32-bit ARM® Cortex®-M3 processor
- Flash and RAM memory and peripherals.
- Extremely low power consumption.
- Excellent RF performance.
- Supported Protocols:
  - ZigBee®
  - Thread

USB OTG

The ARTIK 710/710s Module provides one USB2.0 OTG interface supporting both device and host functionality. The key features of the USB2.0 OTG sub-system are

- Compliant with the USB 2.0 on-the-go specification revision 1.3a and 2.0
- High-speed (480Mbps) mode
- Full-speed (12Mbps) mode
- Low-speed (1.5Mbps) mode (host only)
- Support for session request protocol (SRP) and host negotiation protocol (HNP)
- One control endpoint 0 for control transfer
- Up to 15 device-programmable endpoints:
  - Programmable endpoint type: Bulk, Isochronous, Interrupt
  - Programmable In/Out direction
- 16 host channels

USB HOST

The ARTIK 710/710s Module provides one USB2.0 controller that is fully compliant with the USB 2.0 Host specifications, and the enhanced host controller Interface (EHCI) specification. The key features of the USB2.0 OTG sub-system are

- Detecting the attachment and removal of USB devices

- Collecting status and activity statistics

- Controlling power supply to attached USB devices

- In compliance with the UTMI+ Level 3 revision 1.0

- Controlling the association to either the open host controller interface (OHCI) or the EHCI via a port router

- Root Hub functionality to support upstream/downstream port

HSIC

The ARTIK 710/710s Module provides one high-speed inter-chip (HSIC) version 1.0 module. The key features of the HSIC sub-system are

- Support for ping and split transactions

- Up to 30MHz operation for a 16-bit interface

- Up to 60MHz operation for a 8-bit interface

- Support for HSIC version 1.0

MIPI CSI

The ARTIK 710/710s Module provides one 4-lane mobile industry processor interface (MIPI) interface that complies with the MIPI camera serial interface (CSI) standard specification V1.01r06 and D-PHY standard specification v1.0. The key features of the MIPI CSI sub-system are

- 1, 2, 3 or 4 data lanes

- Support for the following image formats:

    – YUV420, YUV420 (Legacy), YUV420 (CSPS), 8-bit YUV422, 10-bit YUV422

    – User-defined byte-based data packet

    – Compatible to PPI (Protocol to PHY interface)

MIPI DSI

The ARTIK 710/710s Module provides one 4-lane MIPI interface that complies with the MIPI DSI standard specification V1.01r11. The key features of the MIPI DSI sub-system are

- Maximum resolution ranges up to 1920×1080

- Supports 1, 2, 3 or 4 data lanes

- Supports pixel format:

    – 16bpp, 18bpp packed, 18bpp loosely packed (3 byte), 24bpp

- Supported interfaces are

    – Protocol-to-PHY Interface (PPI) up to 1.5Gbps, in MIPI D-PHY

    – RGB Interface for video image input from display controller

    – PMS control interface for PLL to configure byte clock frequency

    – Prescaler to generate escape clock from byte clock

HDMI

The ARTIK 710/710s Module provides one HDMI v1.4a interface. The key features of the HDMI sub-system are

- Support for v1.4a spec
- Up to 1080p video resolution
- HDMI Link + HDMI PHY
- Support for the following video formats:
    - 480p@59.94/60Hz
    - 576p@50Hz
    - 720p@50/59.94/60Hz
    - 1080p@50/59.94/60Hz (No support for interlaced format)
- Support for 4:4:4 RGB
- Support for up to 8-bits per color

LVDS

The ARTIK 710/710s Module provides five low voltage differential signaling (LVDS) output channels with one clock channel. The key features of the LVDS channel system are

- Output clock range 30–125MHz
- Support for 630 Mbps per channel
- Up to 393.75MB/s data transport
- Support for power down mode

Gigabit EMAC

The ARTIK 710/710s Module provides one Gigabit EMAC interface. The most important features of the Ethernet MAC module are

- Standard compliance
    - IEEE 802.3az-2010: energy efficient Ethernet (EEE)
    - RGMII v2.6
- MAC supports the following features:
    - 10/100/1000 Mbps data transfer rates with an RGMII interface to communicate with external Gigabit PHY
    - Full duplex operation
    - Half duplex operation
    - Flexible address filtering
    - Additional frame filtering

SD/MMC

The ARTIK 710/710s Module provides one SD/MMC interface. The Mobile Storage Host is an interface between the system and the SD/MMC. The key features of mobile storage host sub-system are as follows:

SD

- Support for Secure Digital I/O (SDIO – version 3.0)
- Support for Secure Digital Memory (SDMEM – version 3.0)
- Consumer Electronics Advanced Transport Architecture (CE-ATA-version 1.1)
- Support 4-bit SDR mode up to 50MHz
- Support for PIO and DMA mode data transfer
- Support for 4- bit data bus width

MMC

- Support for Multimedia Cards (MMC – version 4.41)
- Support for Embedded Multimedia Cards (eMMC – version 4.5)
- Support for 4-bit SDR mode up to 50MHz
- Support for PIO and DMA mode data transfer
- Support for 4- bit data bus width

Memory Controller

The ARTIK 710/710s Module has one DDR3 memory interface. The key features are

- One 32-bit DDR3 memory interface
- Two 512MB DDR3 16-bit memory chips, for a total of 1GB
- Up to 800MHz DDR3 speed with a maximum throughput of 6.4GB/s

JTAG

The JTAG core provides debug capabilities for the developer and is compliant with the IEEE 1149 standard.

Security Subsystem

In addition to the Secure Element, the main processor on the module provides additional security features. The key features of the Security Controller sub-system are

- Secure 128-bit die ID (available to the ARTIK 710s Module only)
- Secure JTAG featuring a secure 128-bit JTAG ID (available to the ARTIK 710s Module only)
- Secure boot featuring a 128-bit boot ID (available to the ARTIK 710s Module only)
- Security Controller (available to the ARTIK 710s Module only)
- Secure Element (all features in ARTIK 710s Module; limited features in ARTIK 710 Module)

Security Controller

The Security Controller provides ARM TrustZone features and hardware cryptographic accelerators as follows:

- ARM TrustZone
  – TZPC (TrustZone Platform Controller)
  – TZASC (TrustZone Address Space Controller)
  – TZMA (TrustZone Memory Adapter)
- Hardware cryptographic accelerators
  – DES, Triple DES
  – AES
  – SHA-1
  – MD5

Secure Element

The ARTIK 710/710s Module has a dedicated Secure Element to assure end-to-end authentication and communication between nodes in an IoT setting. The most important hardware features of the Secure Element are

- An ISO/IEC 7816 14443-compliant interface.
- Dedicated 16-bit SecuCalm CPU core
- Crypto co-processor
  – Modular exponential accelerator
  – RSA 2080 bits
  – ECC 512 bits
- Data security
  – Memory encryption for all memory
  – 256B read-only and 256B nonerasable flash area
  – Selective reset operation if abnormal voltages/frequencies are detected
- Embedded tamper-free memory
  – 32KB ROM
  – 264KB FLASH
  – 2.5KB cryptographic memory

- Serial interfaces:
    - ISO 7816-3-compliant interface
    - Asynchronous half-duplex character receive/transmit serial interface

Eight-Core Processor System

The processor system architecture that resides on the ARTIK 710/710s Module is a system-on-a-chip (SoC) based on a 32/64-bit RISC architecture. Designed using the 28nm low power process, the processor system architecture provides superior performance using an eight-core CORTEX®-A53 CPU. The key features of the ARTIK 710/710s Module are

- Eight-core ARM® Cortex®-A53, RISC architecture

- Maximum core speed 1.4GHz

- 32KB I-Cache per core

- 32KB D-Cache per core

- 1024KB L2-Cache shared between the eight cores

- Support for dynamic virtual-address mapping

Timer

The ARTIK 710/710s Module has four dedicated timer channels. The most important features of the Timer module are

- Timer or watchdog timer modes

- Four dedicated Timer channels with watchdog timer

- Normal interval timer mode with interrupt request

- Reset on timer countdown

- Level-triggered interrupt mechanism

Interrupt Controller

The ARTIK 710/710s Module has one interrupt controller module. The most important features of the interrupt module are

- Vectored interrupt controller
- Support for four interrupt types
    - Sixteen software generated interrupts
    - Six external Private Peripheral Interrupts (PPIs) per processor
    - One internal PPI for each processor
    - 128 shared peripheral interrupts

- For each interrupt source the following properties are available:
  - Fixed hardware interrupt priority level
  - Programmable interrupt priority level
  - Hardware interrupt priority level masking
  - IRQ and FIQ generation
  - Software interrupt generation
  - Test registers
  - Raw interrupt status
  - Interrupt request status

DMA

The ARTIK 710/710s Module has one scatter-gather DMA module. The most important features of the DMA module are

- 16 channels of dedicated DMA
- 16 DMA request lines
- Various operating modes
  - Single DMA mode
  - Burst DMA mode
  - Memory-to-memory transfer
  - Memory-to-peripheral transfer
  - Peripheral-to-memory transfer
  - Peripheral-to-peripheral transfer
- Support for 8/16/32 bit wide transactions
- Big endian and little endian (default) support

RTC

The ARTIK 710/710s Module has one real time clock (RTC) module. The most important features are

- Four spread-spectrum PLLs
- Two external crystals: one 24MHz crystal for the PLLs and one 32.768KHz crystal for the RTC
- One 32-bit RTC counter
- Support for alarm interrupt using RTC
- Support for various power modes:
  - Normal, Idle, and Sleep (Suspend to RAM)

Video Input Processor

The ARTIK 710/710s Module provides one video input processor (VIP). The key features of the VIP sub-system are

- Support for external 8-bit and 16-bit MIPI
- Support for internal MIPI-CSI
- Support for images up to 8192×8192
- Support for clipping and scale-down
- Support for YUV420 memory format

Scaler

The ARTIK 710/710s Module provides one universal scaler. The key features of the scaler are

- Support for different input formats:
  - YUV420, YUV422, YUV444
- Flexible size, from 8×8 up to 1920×1080 with a granularity of 8
- Upscale ratio from 8×8 to 1920×1080
- Downscale ratio from 1920×1080 to 8×8
- Low pass filter available after upscale or before downscale
- Horizontal 5-tab filter with 64 sets of coefficients
- Vertical 3-tab filter with 32 sets of coefficients

Multiformat Codec

The ARTIK 710/710s Module provides one integrated Multiformat Codec (MFC) module. The key features of the MFC sub-system are

- Decoder:
  - H.264 : BP, MP, HP Level 4.2 up to 1920×1080, up to 50MBps
  - MPEG4 : Advanced Simple Profile (ASP) up to 1920×1080, at up to 40Mbps
  - H.263 : Profile 3 up to 1920×1080, up to 20Mbps
  - MPEG 1,2 : Main Profile, High Level up to 1920×1080, up to 80MBps
- Encoder:
  - H.264 : Baseline profile, Level 4.0 up to 1080p, up to 20Mbps
  - MPEG4 : Simple profile, Level 5.6 up to 1080p, up to 20Mbps
  - H.263 : Profile 3, Level 70 up to 1080p, up to 20Mbps

Graphics Pipeline

The ARTIK 710/710s Module provides one 2D and 3D graphics pipeline module. The key features of the graphics pipeline are

- Two pixel processors:
    - Tile oriented processing
    - Alpha blending
    - Texture support, non-power-of-2
    - Cube mapping
    - Fast dynamic branching
    - Trigonometric acceleration
    - Full floating-point arithmetic
    - Line, quad, triangle and point sprites
    - Perspective correct texturing
    - Point sampling, bilinear and trilinear filtering
    - 8-bit stencil buffering
    - 4-level hierarchical Z and stencil operation
- Geometry processor:
    - Programmable vertex shader
    - Flexible input and output formats
    - Autonomous operation tile list generation
    - Indexed and non-indexed geometry input
    - Primitive constructions with points, lines, triangles and quads
- Support for OpenGL ES 1.0 and 2.0

PCM

The ARTIK 710/710s Module provides one PCM channel. The PCM interface provides a bi-directional serial interface that can be connected to an external audio codec. The key features of the PCM subsystem are

- Supports both Master and Slave mode external audio codecs
- Supports both short and long frame synchronization
- Supports a variety of data formats with a default format of 13-bit 2's complement, left justified, clock MSB first

MODULE PADS

The ARTIK 710/710s Module utilizes signal and ground balls providing all the relevant signaling. *Figure 3* shows how the balls are oriented and how signal coordinates are assigned to the PADs of the ARTIK 710/710s Module. *Table 2*–*Table 6* describe the relation between the ball coordinates and the ball signal names. These tables also provide detailed characteristics for each ball signal name.

Ball Table Column Definitions

The meaning of the various columns used in *Table 2* - *Table 6* is explained in *Table 1*.

Table 1. Ball Table Column Definition

Column Name	Column Definition
Ball Loc.	Ball location on the ARTIK 710/710s Module as shown in *Figure 3*.
Ball Name	The ball name on the ARTIK 710/710s Module.
Voltage	Voltage level on the ball.
Default	Default function of the main SoC at hardware power-on.
Type	S: Signal ball, P: Power ball, G: GND ball.
I/O	I: Input, O: Output, IO: Input/Output to/from module
PU/PD	Indicates the presence of module-internal pull-up or pull-down. PU: Pull-Up, PD: Pull-Down, N: No Pull-Up/Pull-Down.
Group	Nominal function group set according to pad name. For more information see the ARTIK 710/710s Module Hardware User Guide. Usually the function of the pin can be reprogrammed.
Function	Explanation on the function of the ball.

FUNCTIONAL INTERFACES

This section shows the functional interfaces that are available at the pads of the ARTIK 710/710s Module. The functions provided are related to the development environment used. Depending on your project you can always choose to reprogram some of the GPIOs that are currently assigned to the predefined functional interfaces.

GPIO ALTERNATE FUNCTIONS

A number of the GPIOs can be programmed to have alternate functions beyond their default behavior using the GPIO API provided in the SW development environment. *Table 29*–*Table 32* provide the alternate functions of all the GPIOs that are available on the PADs of the ARTIK 710/710s Module that can be user programmed.

> **NOTE** In the following tables, the hardware power-up default functions are shown emboldened. Software may subsequently select an alternate function.

BOOTING SELECTION

The ARTIK 710/710s Module supports a variety of booting scenarios as depicted in _Table 33_. The table describes the values of the boot-configuration pad signals needed to initiate the various booting scenarios. When nothing is done, the default booting scenario is Configuration Option 1. In this case, the primary booting device is eMMC. If the primary booting device fails, the secondary booting device (SD0) will attempt to boot the module. If the secondary booting device fails, the tertiary booting device will boot the module.

Table 33. Boot Selection Configuration

Config. Option	Boot Configuration Signals [*]			Primary Booting Device	Secondary Booting Device	Tertiary Booting Device
	AP_GPB13_ SD0_BOOT	AP_GPB15_ SD1_BOOT	AP_GPB4_ VID1_3_BOOT			
1	High	Low	High	eMMC	SD0	USB OTG Device
2	High	Low	Low	SD0	USB OTG Device	–
3	Low	High	X	USB OTG Device	–	–

[*]. Internal pull-up and pull-down resistors automatically select Config Option 1 by default. External pull-up and pull-down resistors are required to select configuration options 2 and 3. The recommended resistor value is 10kΩ.

POWER SEQUENCE

*Figure 4* below shows the ARTIK 710/710s Module Power-On Sequence (Timing).

Figure 4. ARTIK 710/710s Module Power-On Sequence (Timing) Diagram

POWER STATES

<u>Figure 5</u> shows the Power Management state diagram. In this diagram, the entry and WAKEUP conditions for each power down mode are given.

Figure 5. ARTIK 710/710s Module Power Management State Diagram

The following Modes of operation can be distinguished:

*   NORMAL Mode
    *   Everything is running, this is the normal mode of operation when applications are executed on the ARM cores
*   IDLE Mode
    *   CPU clocks are turned off
    *   IDLE state can be initiated by CPU using Software API
    *   The following WAKEUP sources can be used to return to NORMAL Mode:
        *   GPIO Interrupt, RTC Interrupt, AliveGPIO Interrupt (see PAE2, PAF:[1,2]), External IRQ
*   STOP Mode
    *   PLLs are turned off, DRAM goes into self-refresh
    *   STOP state can be initiated by CPU using Software API
    *   Certain WAKEUP sources or the ARTIK 710/710s Module AP_nBATTF signal can be used to transition to NORMAL Mode
    *   The following WAKEUP sources can be used to return to NORMAL Mode:
        *   RTC Interrupt, AliveGPIO Interrupt

For more information on how to access discussed WAKEUP mechanisms like AliveGPIO interrupts, GPIO Interrupts, RTC Interrupts and External Interrupts, refer to the Software User Guide.

ANTENNA CONNECTIONS

Two antennas are required to use the full set of radio communication links on the ARTIK 710/710s Module. One supports the combination of Wi-Fi/Bluetooth, and the other is dedicated to Zigbee.

Figure 6. RF Connector for Bluetooth/Wi-Fi and Zigbee

The U.FL-R-SMT Hirose connector is used for both the Bluetooth/Wi-Fi and the Zigbee antenna connectors on the ARTIK 710/710s Module.

The mechanical size of the connector (receptacle) is described in *Figure 6*. For suggestions on mating the plug and more details on the connector, contact Hirose Electric Co., LTD.

Absolute Maximum Ratings

The ratings given in this section are associated only with stress. It does not imply any functional operation of the device. Exposure to the absolute-maximum rated conditions for long duration affects the reliability of the device.

Recommended Operating Conditions

The recommended operation of the ARTIK 710/710s Module is based on the operating conditions listed in _Table 35_.

Table 35. Recommended Operating Conditions

Operating Temperature	T_C	0	–	70	°C

Power Supply Requirements

The power management of the ARTIK 710/710s Module as described in _Figure 7_ is controlled by the PMIC. This PMIC contains four high-efficiency DC-DC converters and 10 LDO regulators (five of which are available for external use). See _Table 36_ and _Table 37_ for details on voltage and current ranges and how they are used in the ARTIK 710/710s Module.

CAUTION

Use any available LDOs/DC-DC power sparingly. Any power use will increase the module heat generation and may cause signal sequencing and latch-up problems.

NOTE

- I^{2}C data hold time (t_{SDAH}) is minimum 0ns for standard/fast bus mode as defined in I^{2}C specification v2.1. Check whether the data hold time of your I^{2}C device is 0ns or not.

- The I^{2}C controller supports I^{2}C bus device only (standard/fast bus mode), and does not support a C-bus device.

The inner pin locations on the pad, positioned in an L-shaped form, as depicted in *Figure 17*, are described in *Table 64*.

⚠️ **CAUTION**   The inner pads are on a different grid from the outer pads as indicated with the dashed blue lines in *Figure 17*.

For exact dimensions on ball locations, see *Figure 13*. The locations given in *Table 64* are the absolute coordinates measured from the edge of the ARTIK 710/710s Module to the center of each ball. All inner pads are ground (GND) balls.

CERTIFICATIONS AND COMPLIANCE

Bluetooth

The ARTIK 710/710s Module is recognized as a qualified design as set out by the Bluetooth SIG.

Declaration ID: D032725

Qualified Design ID: 88390

CE

The ARTIK 710/710s Module is in compliance with the essential requirements and other relevant provisions of Article 3 of the Radio Equipment Directive 2014/53/EU. Compliance with the following standards was confirmed:

- Article 3.1a (Health and Safety)   EN 60950-1:2006 + A2:2013
  EN62311:2008
  EN 62479: 2010

FCC

The ARTIK 710/710s Module complies with the following two sections (15C and 15E) of Part 15 of the FCC rules namely:

- Spread spectrum transmitter (SST) compliance (15C):
  - 2402–2480MHz frequency range, output power 0.0049W
- Digital transmission system (DTS) compliance (15C):
  - 2402–2480MHz frequency range, output power 0.005W
  - 2405–2475MHz frequency range, output power 0.006W
  - 2412–2462MHz frequency range, output power 0.26W
- Unlicensed national information infrastructure TX compliance (15E) in the:
  - 5180-5240MHz frequency range, output power 0.034W
  - 5260-5320MHz frequency range, output power 0.029W
  - 5500-5720MHz frequency range, output power 0.025W
  - 5745-5825MHz frequency range, output power 0.021W

FCC Identifier: A3LSIP007AFS00

IC

The ARTIK 710/710s Module complies with the IC license–exempt RSS standard.

Radio certification number: 649E-SIP007AFS00

KCC

The ARTIK 710/710s Module complies with the standards set by the Korean communications commission (KCC).

Development kit KCC identifier: MSIP-REM-SEC-SIPKITNXE00

SRRC

Both the ARTIK 710/710s Module and the ARTIK 710 Development Kit comply with the standards set by the People's Republic of China.

CMIIT ID: 2017AJ2592 (M)(ARTIK 710/710s Module)

CMIIT ID: 2017AJ2658 (ARTIK 710 Development Kit)

HDMI Compliance

The ARTIK 710/710s Module passed the self-test, HDMI CTS version 1.4b on 6/30/2016 provided by HDMI Licensing LLC.

RoHS Compliance

The ARTIK 710/710s Module complies with the hazardous substance limits of directive 2011/65/EU and the conformity assessment procedure as outlined in Decision 768/2008/EC, Annex II, Module A, Point 2, as well as RoHS harmonized standard EN 50581.

FCC Regulatory Disclosures

This device complies with Part 15 of the FCC`s Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesirable operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20cm between the transmitter's radiating structure(s) and the body of the user or nearby persons.

This module is intended for OEM integration. The OEM integrator is responsible for FCC compliance and compliance with all applicable regulations including those for modular transmitters 47 C.F.R. 15.212. The OEM product must comply with all applicable labeling requirements including those contained in 15 C.F.R. 15.19. The OEM is solely responsible for certification and testing and labeling of its own products. In addition to any independently required labels, the OEM shall also affix to the outside of a device into which the module is installed a label referring to the enclosed module. This exterior label should be prepared in a legible font and permanently affixed and using the wording "Contains Transmitter Module FCCID: A3LSIP007AFS00"

The OEM is required to ensure that the end product integrates this module so as to maintain a minimum distance of 20 cm between the equipment's radiating structure(s) and the body of the user or nearby persons. The OEM shall also advise its end user of this requirement as required by applicable rules.

The OEM shall require that the end user of its product be informed that the FCC radio frequency exposure guidelines for an uncontrolled environment can be satisfied. The OEM shall further inform its end user that any change or modifications to this module not expressly approved by the manufacturer will void the warranty and the users' authority to operate the equipment.

Industry Canada Regulatory Disclosures

Industry Canada Statement

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Cet appareil est conforme avec Industrie Canada exempts de licence standard RSS (s). L'opération est soumise aux deux conditions suivantes:(1) cet appareil ne peut causer d'interférences, et (2) cet appareil doit accepter toute interférence, y compris les interférences qui peuvent causer un mauvais fonctionnement de l'appareil.

Industry Canada Radiation Exposure Statement and Limitations on Use

This equipment complies with IC RSS-102 radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator and your body. This equipment should be installed and must not be co-located or operating in conjunction with any other antenna or transmitter.

This equipment is restricted to indoor use in the 5.15-5.25 GHz range. This equipment is not able to be operated at 5600-5650. In the United States and Canada, only Channel 1~11 can be operated and these channel assignments deal only with the 2.4 GHz range.

The end product must be labeled to display the Industry Canada certification number of the module.

"Contains transmitter module IC: 649E-SIP007AFS00"

Le dispositif d'accueil doivent être étiquetés pour afficher le numéro de certification d'Industrie Canada du module. **"Contient module émetteur IC : 649E-SIP007AFS00"**

EU Regulatory Disclosures

Statement*

The following statement must be supplied with each product but can be printed in the user manual, the packaging, or provided as a separated leaflet.

> Hereby, Samsung declares that this IoT Module is in compliance with the essential requirements and other relevant provisions of Article 3 of the Radio Equipment Directive 2014/53/EU and RoHS directive 2011/65/EU.
>
> "The declaration of conformity may be consulted at [www.artik.io/certification]"

The 5150 - 5350 MHz and 5470 - 5725 MHz bands are for indoor use only.

The OEM is required to ensure that the end product integrates this module so as to maintain a minimum distance of 20 cm between the equipment's radiating structure(s) and the body of the user or nearby persons. The OEM shall also advise its end user of this requirement as required by applicable rules.

Wi-Fi Interoperability

The ARTIK 710/710s Module is Wi-Fi Certified® by the Wi-Fi Alliance™. *Wi-Fi Certifications* provides an overview of the certifications:
